Northwind Payments API - Troubleshooting Guide (SAMPLE)

This is a synthetic sample document for development. Northwind Payments is a fictional company.

Error PAY-401 Unauthorised: the API key is missing, expired or belongs to a different environment. Check that sandbox keys are used with https://sandbox.api.northwind.test and live keys with the live host. Keys rotate every 90 days; rotated keys stop working 24 hours after rotation.

Error PAY-409 Duplicate transaction: the same idempotency key was sent twice within 24 hours. Generate a new idempotency key for each new payment attempt, and reuse it only when retrying the same request.

Northwind Payments API - Troubleshooting Guide (SAMPLE) (continued)

Webhook signature failures: Northwind signs every webhook with HMAC-SHA256 using the endpoint secret. Compute the signature over the raw request body before any JSON parsing. Reject events older than 5 minutes.

Settlement delays: card payments settle on T+2 business days. Bank transfers settle on T+1. If settlement is later than T+3, escalate to the Integrations team with the merchant ID and payout ID.
